

Digital Headend for Multimedia Services

The Multiscreen Evolution

Vector 12KTS Conference - May 2013

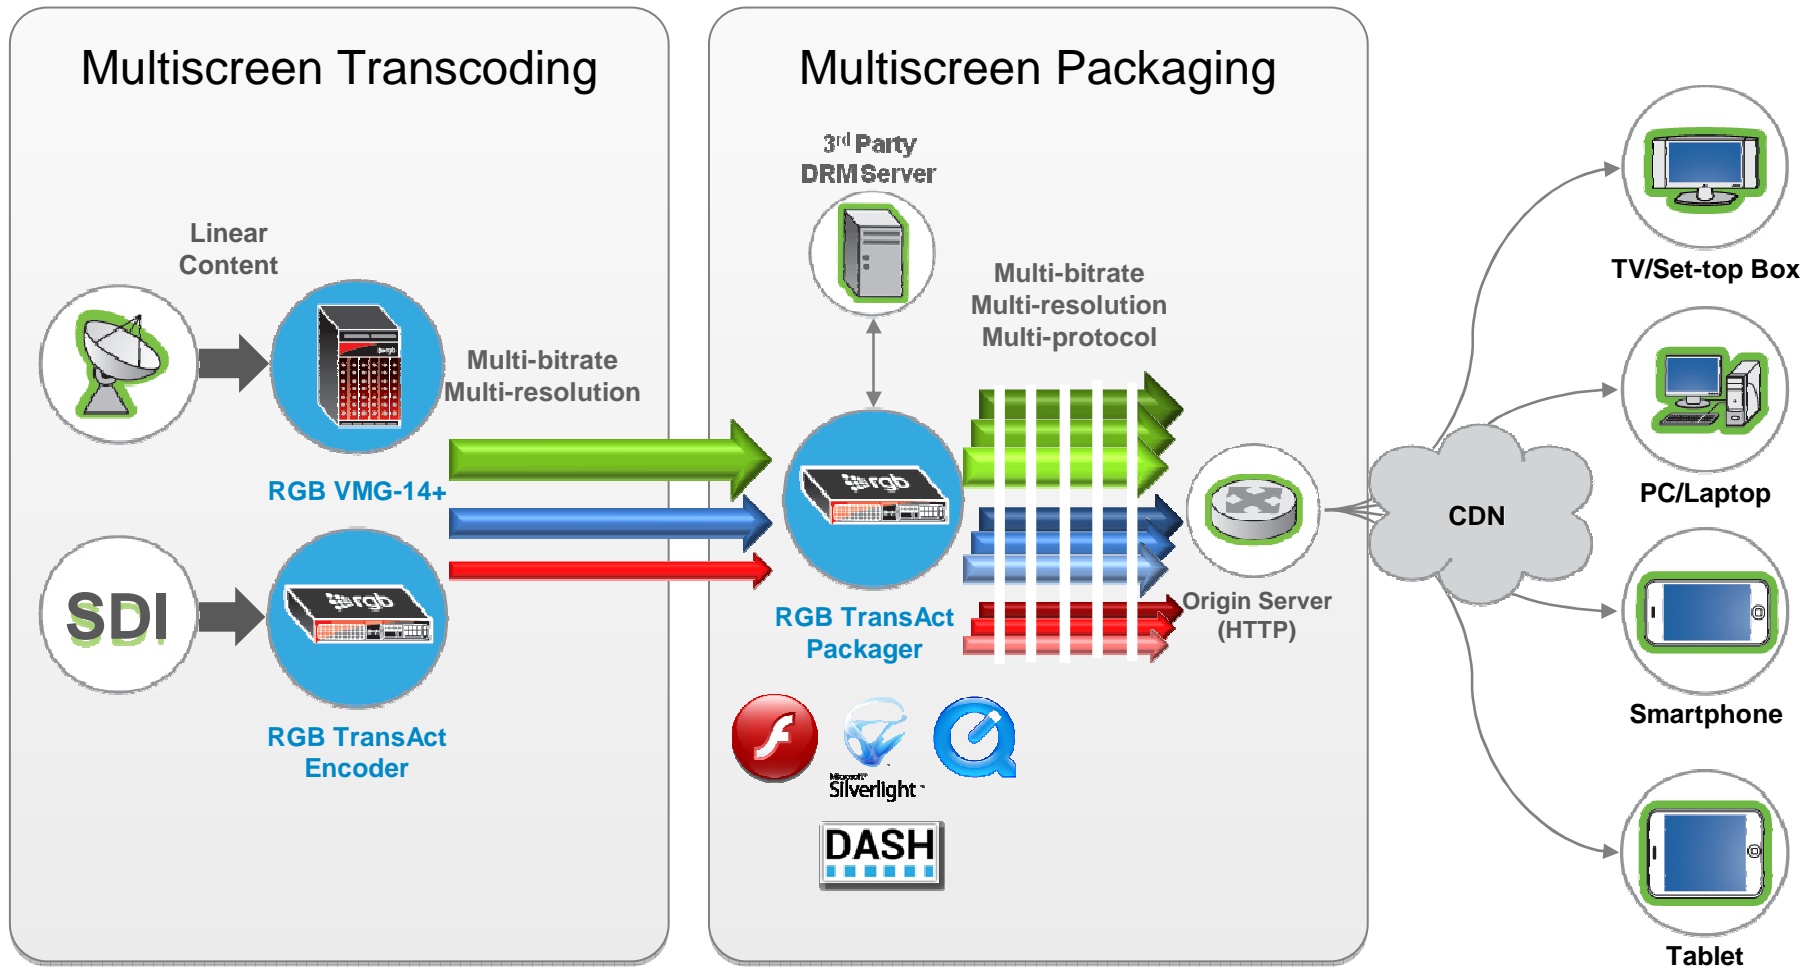

RGB | Overview

- Leading provider of scalable multiscreen IP video delivery solutions
- Development offices in Sunnyvale, California & Austin, Texas
- Support locations in US, EMEA & APAC
- Top tier investors and strong board
- Shipped: \$300m+ lifetime
- 400+ customers in 40+ countries
- 39 patents filed, 17 awarded to date
- Partnerships with Alcatel-Lucent, Juniper, SeaChange and Ericsson

Solutions | Live & On Demand Multiscreen

Products | Transcoding

Video Multiprocessing Gateway (VMG)

- 75+ customers worldwide
- Transcoding over 20,000 outputs
- Award-winner

H/W-based Stream-to-Stream (S2S) Live Transcoding

- Large-screen and multiscreen transcoding
 - MPEG-2 and H.264 for IPTV and/or MBR
- Integrated with TransAct Packager for multiscreen delivery
- High-density, high-capacity, high-availability, carrier-class

Plus:

- Stat muxing
- MPEG-2 transrating/rate-shaping
- Program substitution

TransAct Transcoder / AMS

S/W-based File-to-File (F2F) and S2S Transcoding

- Optimized for mobile S2S transcoding
- H.263, H.264, VP8
- HTTP Live Streaming, RTSP
- Software license or hardware

Plus:

- XML APIs and cluster with TransAct Commander
- Many more codecs/containers: FLV, 3GP, AVI, MP4

Products | Packaging

TransAct Packager / AMS

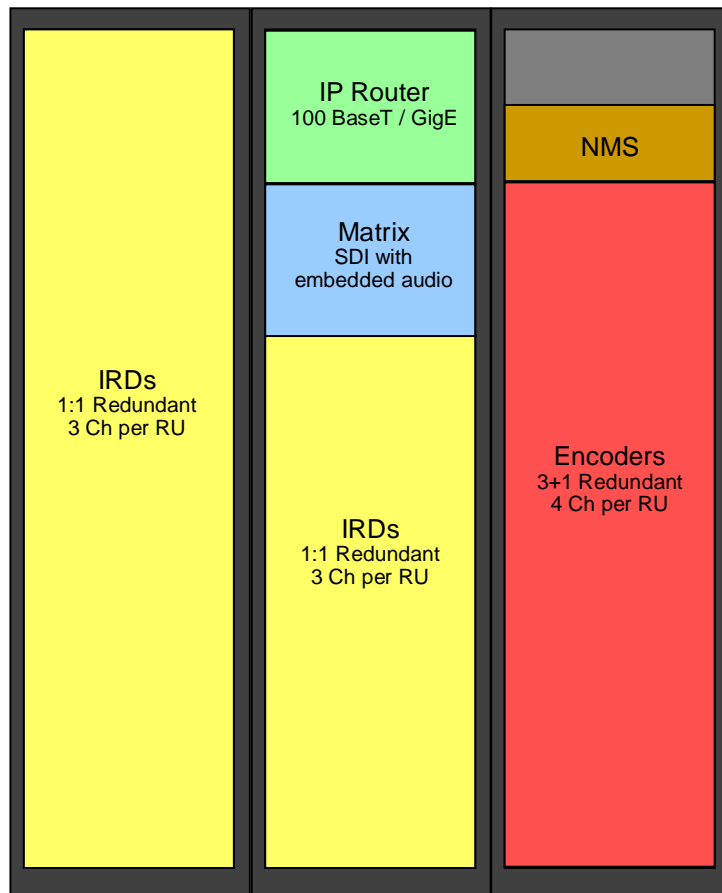

- **Multiscreen video fragmentation and packaging**
 - HLS, MSS, HDS, RTMP, MPEG DASH
 - Live, VOD and Just-in-Time Packaging
- **432 streams per 1RU chassis (live), 500 sessions for JITP**
- **Integrated IIS server functionality (create MSS manifests)**
- **Encryption:**
 - AES-128 for HLS
 - PlayReady for SS
 - Adobe Access for HDS & HLS (linear and JITP applications)
- **DRM Partners:**
 - HLS: Adobe, Conax, Irdeto, Nagra, NDS, SecureMedia, Verimatrix
 - PlayReady: BuyDRM, Verimatrix, Latens, multiple MSO solutions
 - HDS: Adobe
 - HLS CC, HDS CC, MSS CC (linear and JITP applications)
- **HLS and MSS DVB Subtitles (live)**
- **Interoperable with CDN solutions from ALU/Velocix, Cisco, Edgeware, Juniper/Ankeena, Verivue**

VMG | Operational Simplicity & Savings

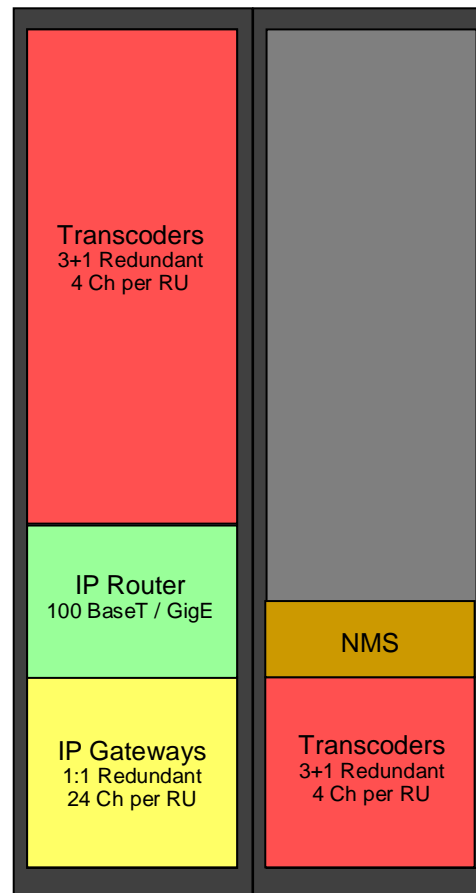

100 SD Channels with Redundancy

Pizza Box Architecture with
Baseband Video Interfaces

550 Cables / 10,000W

Pizza Box Architecture
with IP Video Interfaces

126 Cables / 6,000W

Blade Architecture with
IP Video Interfaces

16 Cables / 2,500W

VMG | Avoid the Mess and Cost of 1RU Boxes

With RGB's VMG:

- Eliminate messy wiring
- Reduce rack space
- Reduce power consumption
- Simplify operations

Multiscreen 2.0 | Next-Generation Multiscreen

Ad Insertion for Multiscreen	<ul style="list-style-type: none">▪ Network or client-based adaptive bitrate ad insertion▪ AWE, PRRS, Stitcher, Origin servers▪ Partners for POIS ADS, CMS/CNS,...
Time-Shifting Multiscreen	<ul style="list-style-type: none">▪ DVR, catch-up TV, start-over, virtual assets▪ Partners for scheduling, back office, sub mgmt, ...
Integrated IP Video Platform	<ul style="list-style-type: none">▪ High number of streams, many profiles with high resolution for large screen TV video delivery▪ Enhanced transcode/encode with more capabilities
Transcoders & Separate Pkgs	<ul style="list-style-type: none">▪ Higher number of streams, multi-format▪ More devices, more resolutions, more configuration
Encoders w/ Integrated Pkgr	<ul style="list-style-type: none">▪ Lower resolutions for a few devices, tablets/mobile▪ Simple configuration, basic UI/interface

JITP | Just In Time Packaging Advantages

- JITP is (almost always) more economical than storage, especially when starting a service; saves operational and bandwidth costs
- JITP de-risks evolving formats; easy migration to new formats
- Converts from mezzanine format to any HTTP streaming format in response to client requests
 - Creates playlist/manifest or fragments requested by each client
 - Eliminates storage of multiple HTTP streaming formats
 - Avoids storage and reprocessing of rapidly evolving HTTP streaming formats
 - Cacheable → don't need JITP for every client
 - Integrates encryption and closed captioning
- VOD
 - More cost effective than storage
 - Creates uniform, scalable workflow
 - Hybrid model with cached short-tail and JITP long-tail makes sense
- nDVR
 - Fixes memory intensive 'copy per user' problem

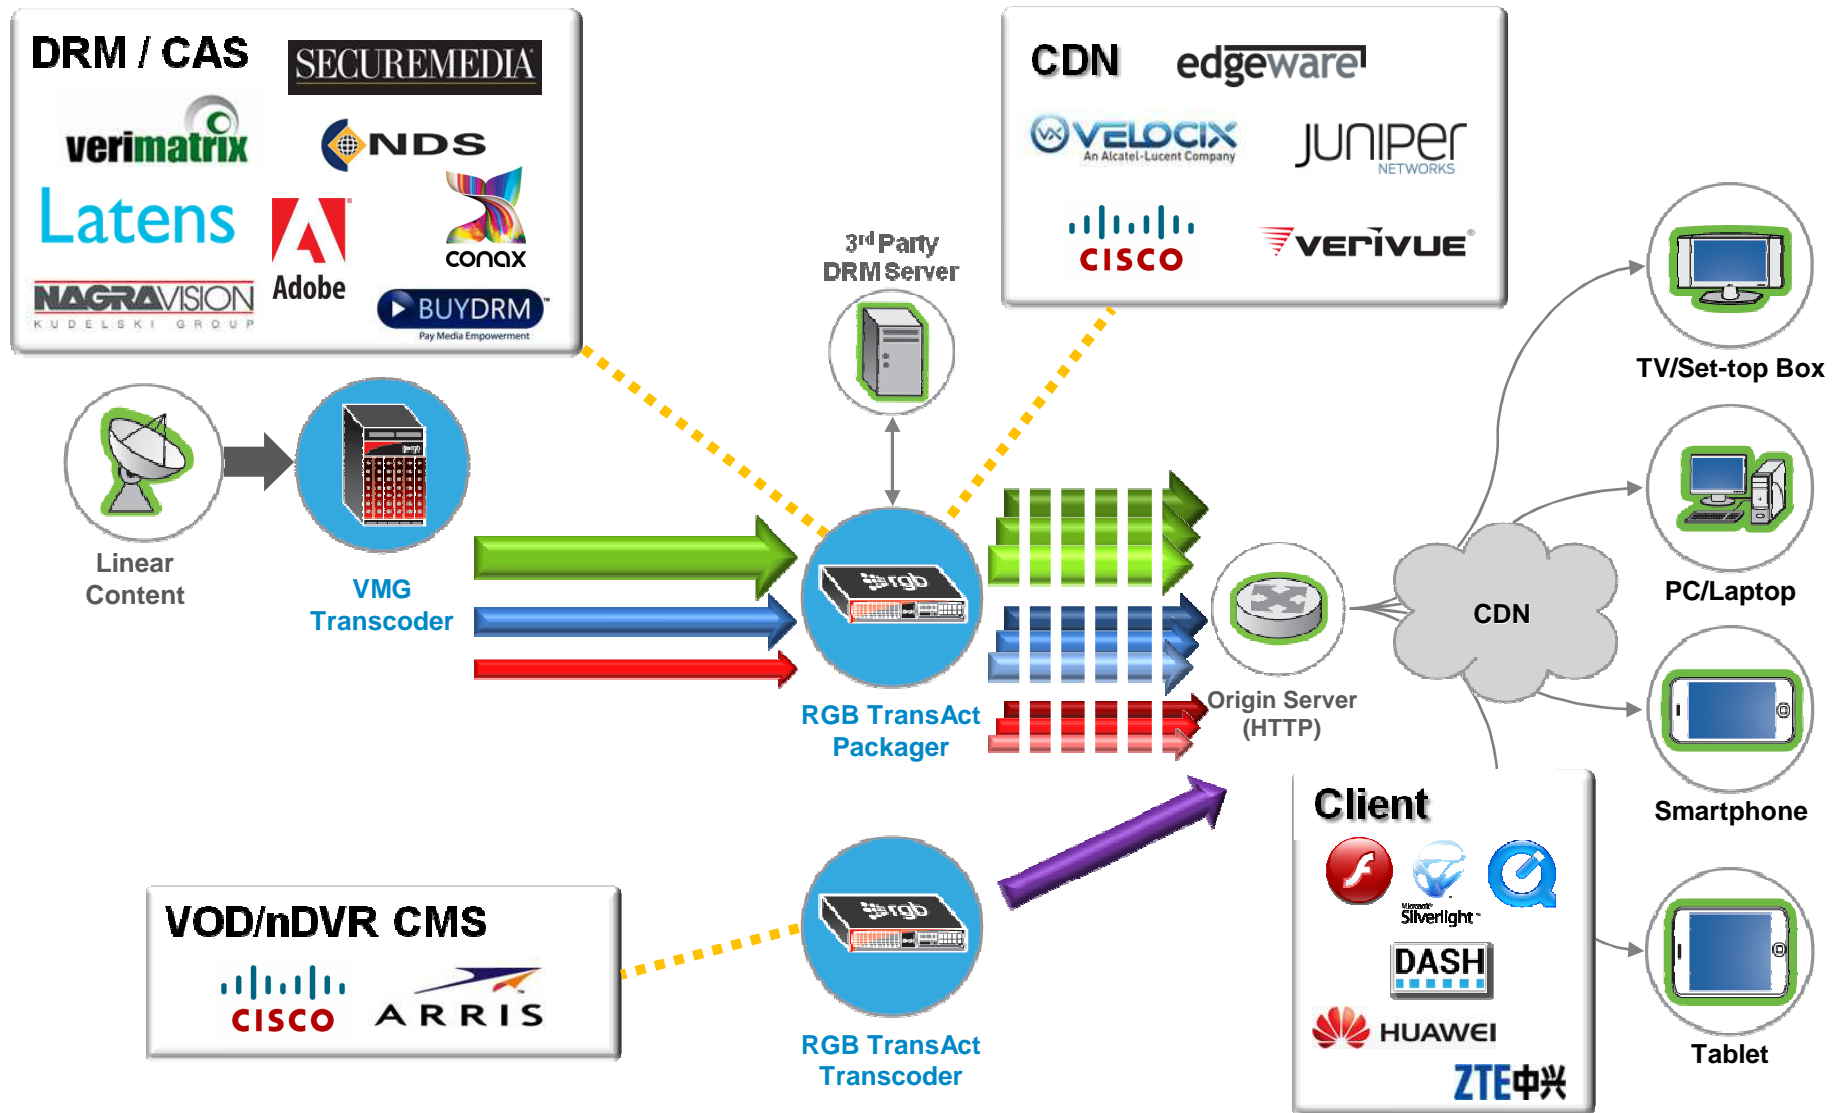

AIM | Adaptive Bit Rate Ad Insertion Advantages

- Support for HLS; future support for MSS & HDS
- Ad ingest, transcode, position
- Support for live and VOD
- CCMS schedule files (support zones)
- SCTE 130 interface for third party campaign management (BlackArrow integration complete)
- Up to 5M users, 25K ads, 1000 channels, 500 zones
- Pre-roll / program substitution / blackout
- High availability – redundancy built in

Partners | Multiscreen Ecosystem

Dziekuje bardzo!
